

PVC STOP PROFILE J12
ETIX 3825/3830 (12,5mm)

The stop profiles are designed for the precise finishing of plasterboard in ceiling or wall structures. They ensure a durable and aesthetically pleasing connection to adjacent structures made from different building materials. These profile are used in the installation of plasterboard to secure a firm connection between the boards or with adjacent structures.

Stop Profiles	Width (mm)	Color (mm)	Length (m)	Packaging (pcs)
ETIX 3825	12,5 mm	white	2,5	50
ETIX 3830	12,5 mm	white	3,0	50

ADVANTAGES

- Provides an aesthetically pleasing board connection
- Protects the boards from mechanical damage
- The profile edges can cover minor damage to the board ends caused before installation

INSTALLATION

Install the PVC stop profile before plastering the wall. The installation surface must be smooth and even. Apply a layer of plaster to the outer surface, then press the PVC stop profile into the plaster. Gradually cover the profile with plaster until a seamless surface with the wall is achieved.

MATERIAL

PVC.

STORAGE

Store in a horizontal position. Keep in a dry place and protect from moisture and mechanical stress.
